

**MOON FIGHT**

**COLLECT-FIGHT-EARN**

---

## MOON FIGHT (\$MF)

Moon Fight (\$MF) is a blockchain game that switched its gears from hundreds of rocket avatar collections to a fighting game straight to the moon where players can fight with their collection of avatars.

In the Moon Fight game, Players fight each other without any interaction with the platform. They just own Rocket NFTs and will constantly battle with others until they reach the moon.

The AI based battle algorithm is a unique feature of Moon Fight and it gives the possibility of Hold-To-Earn Gaming experience.

Players can watch live and previous gameplay for the performance of the equipped AI engine.

Currently, **200 handcrafted NFTs** are ready to launch. By staking NFTs, you will increase the level and experience of adding more value to the NFT itself for trading.

This does not mean that ordinary users who have not minted NFTs cannot participate in battles. All holders can still participate, but the odds of winning are lower.

## AI BASED NFT BATTLE GAME

We currently have **9 AI engines** developed, one for all \$MF holders and the rest for each NFT level.

We constantly upgrade our battle AI program by creating a bounty and incentivize our NFT holders by giving them level and experience. The more levels of NFT, the faster it adapts to the new AI engine.

Whenever a new AI engine is submitted by a developer, we create a contest of new AI algorithms and choose the right one.

The chosen developer will be rewarded by our Token and this adds more value to our Token utility.

## GAME MECHANICS

1. Players mint NFT. Each NFT has its base level + experience.
2. Players choose an AI engine for NFT based on their level and stake them into the game smart contracts.
  - Nine AI engines are currently available, but more will be available through the developer bounty program

- Here the higher level engine means better chance of winning the prize
  - Each level represents an AI engine number. AI engines are numbered in order of power.
3. The game runs every hour, and for each game, 3% of the transaction fee of \$MF for the last hour is distributed to the winner. There is 1 winner for every 10 players. So, if 1,000 NFTs are staked, the transaction fee will be distributed among 100 winners.
    - For NFT owners, there is 1 winner for every 10 players.
    - For normal players without NFT, there is 1 winner for every 100 players.
  4. The claimable tokens are distributed once per day.
    - In order to reduce the gas fee, we don't distribute per game but instead, we do it once a day.
    - When claiming, users can also claim new experiences and levels, which allows users to apply new AI engines.
  5. The higher the token price, the more rewards are given to the winner.

## TREASURY

MoonFight follows in the footsteps of successful DeFi protocols by following a "gradual decentralization" process, starting with the founding team.

We are creating a voting system that allows holders to vote on all kinds of decisions, including all game mechanics, smart contracts, and funding.

## UTILITY

**A tried and tested regular burn mechanism that helps keep the chart stay up and healthy.**

Furthermore, Our tokens are not only for gaming or voting, but also many more utilities such as LaunchPad, Lending and more.

We are building some Defi applications like Decentralized lending protocol and LaunchPad. These services have different tiers depending on the \$MF tokens you own.

We have a very tight deadline for our product: we will publish our game by the end of January.

Don't forget to check out our **roadmap** as it contains some detailed information about the timeline of the project delivery.

## MISSION

Our mission is to create a metaverse space where people can create their own missions fully funded by \$MF to build rockets to reach the moon. In a nutshell, we are creating an ecosystem in the metaverse where people create their own spaces and interact with others in real time

- We currently have 4 stages of the roadmap.

For our marketing plan, we plan to onboard some of the best influencers in the crypto space to better spread MoonFight's word of mouth.

The future of MoonFight is bright.
